But since the charge controller can't use amps higher than 15a, each solar panel cannot produce a full 400w of power, which means it can't push in 1,600w into the Delta Pro. With the high-quality Rigid 100 solar panels, their VOC is 21.59v and the ISC is 5.48a, it's possible to get 1,800w of solar panels connected. There would be three ...

One 120v line from the solar panel inverter is a two wire system, Hot (L1) and Neutral (N) wires). 120v ac from wire to wire. If you were running your minisplit on 240v ac before making the solar/inverter circuit change, the panel had a three wire system (L1, L2 and N (Neutral)). You need provide a three wire system to the panel.

Currently the batteries and the inverter are in a room in the barn with 2 conductors plus ground running to the house. I was hoping to instal a 240v system because the generator I am looking at using has 240v output, the well pump is 240v and I need some occasional use 240v outlets in the barn/shop, I don't need 240v in the house though.
