Do you have a background in applied Energistics?

I do have background knowledge on Applied Energistics, nothing special, just the gist of things. I always used to think that the best way to set this up was to just have multiple chests with 64k storage inside of them and that was it, and that was how I used AE (Obviously not the smartest or most organized way of doing things).

Chests, drives, and storage buses can have priorities. In your case you can have the storage bus set to hold minecraft blocks. If you want to save some of each and junk the rest then you can have the priority of your preformatted storage highest, followed by the storage bus for dumping, followed by general unformatted storage at the lowest priority.

The ME Storage Bus, when attached to another inventory block in the world lets you access that inventory via networked functions. This allows you to use chests, barrels, or other types of item storage in your networks. The storage via the ME Storage Bus is bi-directional, it can both insert, or extract items from the inventory block it is attached to as long as the ME Storage Bus has its ...

Applied Energistics: Upgrading Storage Cells . Question I'm starting to outgrow the 16k storage cells in my ME system. Seriously, I've got at least 50 items with over 20k in ME storage. I need to upgrade to 64k cells, but I don't think my wrist will take it. What is the quickest way to automate this transfer between cells?

Well isn't AE2 storage just an older version of refined storage?? Not at all. Refined Storage started as a remake of AE1. During its time (Up to Minecraft 1.6), AE1 was widely criticized for being too OP and "magic-blocky." AE2 was made during 1.7 and added much more appropriate gating and cost to use/expand.
