

Is Jersey under pressure to develop a long-term energy strategy?

Jersey's government is under pressure to develop a long term strategy for energy production and consumption, according to an island think tank. Mark Boleat from Policy Centre Jersey said "inertia is a problem" identified within its report on energy policy.

How is energy supplied to Jersey?

Energy is supplied to Jersey predominantly through imports; there is also a small amount of on-Island production. The primary supply of energy is either distributed to consumers in its original form or is transformed into different sources of energy; for example, petroleum products can be burned to generate electricity.

What are the main sources of energy in Jersey?

In 2021, petroleum products (such as road fuels and heating oil) accounted for three-fifths (58%) of Jersey's FEC (see Figure 4). Electricity accounted for over a third (38%) and manufactured gas the remainder (3%). 7.5 FEC per capita for Jersey using mid-year population estimates.

Does Jersey electricity need a clear sense of direction?

The head of Jersey Electricity, Chris Ambler, said the government needs to provide "a clear sense of direction." "We really need to move this agenda forward," he said. "We need to experiment with things and we need to do trials. So things like...support for EV charging, things like trials on public transport.

What percentage of Jersey's electricity is imported?

Since 1993, the overall public electricity supply has increased, and the proportion of electricity imported into Jersey have increased, see Figure 6. Throughout the 1990s imported electricity accounted for between 40% and 60% of Jersey's public electricity supply. In 2021, this proportion was 96%.

How does Jersey's energy data work?

Jersey's energy data is submitted annually to the compilers of the UK's national greenhouse gas inventory, Aether, who independently verify and validate the data using internationally agreed methodologies.
