

Who is Alfa Laval?

Alfa Laval is a leading global provider of first-rate products in the areas of heat transfer, separation and fluid handling. We're set on helping billions of people to get the energy, food, and clean water they need. And, at the same time, we're decarbonizing the marine fleet that is the backbone of global trade.

How can Alfa Laval help your business transition to cleaner energy?

Alfa Laval has already partnered with customers to help support their transition to cleaner energy. Contact us today to learn how we can help your business. With leading heat transfer and separation technologies, Alfa Laval is supporting operations around the world with their clean energy transition.

How does the Alfa Laval heat exchanger system work?

Alfa Laval's heat exchanger system stores energy from renewable sources such as sun and wind for hours or days using specially designed heat exchangers. It releases the power back to the grid when there is a time of high demand. Watch this video to learn how it works, or click below to read the whole story!

What is Alfa Laval doing in San Bonifacio?

Today Alfa Laval is hosting its annual Capital Markets Day in San Bonifacio, Italy, at one of the company's heat exchanger production sites. The company is presenting an update on its strategic priorities, financial targets and investment plans to secure continued growth.

Why should you invest in Alfa Laval?

Following years of both organic and inorganic growth at Alfa Laval, coupled with significant investments in expanding production capacity and developing innovative solutions and products for the future, Alfa Laval is today presenting plans to secure further growth through technology and footprint investments.

How does Alfa Laval contribute to the project?

Alfa Laval contributes to this 1.2-billion-euro project by supplying two different pretreatment units for the plant. The construction of the plant is an important step on the journey towards decarbonizing the global transport sector in a sustainable manner, while creating more than 2,000 direct and indirect jobs in the process.

The refinery team at Alfa Laval has helped optimize processes in numerous refineries around the world. See how our well-proven solutions have helped customers maximize the return on their refinery investments, whether it's a revamp or a greenfield plant. ... Hengli has cut energy consumption in its grassroot CDU with 30% by using Alfa Laval ...

Hear from Madeleine Gilborne, Alfa Laval's Business Development Manager for Clean Technologies, about our work within clean energy, energy efficiency, and the circular economy. Partnering with Alfa Laval puts you in touch with leading industry experts like Madeleine, who support the acceleration of your operation's

sustainability.

This is precisely why Alfa Laval Extend(TM), a new heat-exchanger upgrade, has been highly successful at one of Scandinavia's largest dairies. ... "The incredible amounts of water, energy, and chemicals that can potentially be saved with a successful rollout are impressive. Of course, the substantial increase in uptime and productivity for ...

Alfa Laval PANX-series of decanter centrifuges is designed for palm oil clarification and purification. The units offer maximum oil recovery with low energy consumption. MX mixer Specially designed to meet the specific mixing ...

In today's brewing industry, managing water and energy costs while meeting sustainability targets isn't just challenging - it's critical for survival. With water scarcity affecting key regions, rising operational costs, and increasing pressure for sustainable practices, breweries need innovative solutions that deliver both environmental and economic results.

The range of Alfa Laval i-DW decanter centrifuges is ideal for continuous sludge dewatering and thickening from municipal and industrial wastewater treatment as well as from potable water treatment, when the main focus is reliability, cost-efficiency and simple operation with medium capacity and dry solids.

Driving the global energy transition towards biofuels, Alfa Laval has secured two contracts worth 350 million SEK to supply cutting-edge HVO pre-treatment technology to Europe's largest biofuel facility. The facility, a joint ...

Energy efficiency is one way we can collectively reach the Paris Agreement, and we believe that collaboration through the Energy Efficiency Movement is a key to create a decarbonized future. ... That is why Alfa Laval and ABB have joined forces to establish the Energy Efficiency Movement (EEM), a non-profit association with focus set on energy ...

Alfa Laval has won a contract to supply innovative pretreatment technology that will be key to producing hundreds of thousands of tonnes of sustainable aviation fuel (SAF) every year at southern Europe's largest biofuel facility. ... According to the International Energy Agency (IEA), the use of advanced feedstock in producing this fuel must ...

The earlier Alfa Laval is involved in a project, the better the process can be designed that reaps the full benefits of energy efficiency. Get started with Alfa Laval today! A critical step toward energy efficiency is to replace shell-and-tube heat exchangers with plate heat exchangers.

Alfa Laval technology will be at the core of a new EUR 100 million food processing plant in Sweden, which is set to play a ground-breaking role in the global drive to bridge the protein gap. ... Mastering water & energy efficiency in modern breweries. In today's brewing industry, managing water and energy costs while meeting sustainability ...

Energy efficiency. La eficiencia energ&#233;tica es uno de los principales contribuyentes para alcanzar el Acuerdo de Par&#237;s. ... En Alfa Laval, llevamos d&#233;cadas desarrollando tecnolog&#237;as de intercambiadores de calor de placas ...

Alfa Laval has won a contract to supply innovative pretreatment technology that will be key to producing hundreds of thousands of tonnes of sustainable aviation fuel (SAF) every year at southern Europe's ...

Alfa Laval has developed a wide range of advanced heat transfer and separation technologies that are already being used to enable the transition to a cleaner energy future. Working in close collaboration with our customers and partners, we are accelerating the transformation of our energy infrastructure to advance sustainable energy solutions ...
