What is a wind power charge controller?

This product is the result of many years of research and development by an expert team of specialised wind power engineers. This charge controller is designed to charge a 24V battery bank using energy generated from wind turbines and solar panels.

Can a PWM solar controller work with a wind turbine?

Hybrid Capability: The built in PWM solar charger allows this controller to work with both solar panels and wind turbines, eliminating the need for separate controllers. It can also be used as a stand-alone wind (MPPT) or solar (PWM) controller and allows for easy transition to a hybrid system.

Where can I buy a solar charge controller?

Sold by WERCHTAY US and ships from Amazon Fulfillment. The solar charge controller of wind and solar hybrid adopts advanced high-speed processor and PWM control algorithm, which can ensure the realization of PWM charging under low wind speed, and has the characteristics of high response speed, high reliability and high industrial standards.

What is a wind charging circuit?

The wind charging circuit is equipped with cutting-edge power tracking and voltage-boosting features, achieving the maximum available power from the wind turbine even in low-wind conditions. It also comes with a turbine braking function to protect the wind turbine and the battery during high winds. **Key Features**

Can a wind turbine charge a 24v battery?

Key Features Low Wind Boost Charging: During periods of low wind speed the voltage output of your turbine may be below the charging threshold of your battery. This innovative boost type controller can raise the voltage of the turbine to ensure it can keep charging a 24V battery from wind turbine voltage as low as 4V.
