What we have here is a large box -- a 12-gauge steel Wiegmann NEMA enclosure, to be exact -- with shelving that holds 100 kWh worth of Tesla battery modules, along with a charger and inverter.

Underneath the inside floor, roughly in the middle of the passenger compartment, lies a compact lithium-ion battery weighing less than 60 kilograms (132.3 lb) and featuring highly performance-optimized cells. It can temporarily deliver up to 100 kW of power to the electric motors, while its energy capacity is limited to around 1.8 kWh.
