

How many EU storage blocks does IC2 have?

The button in the upper right cycles through the available options for the storage block's redstone behavior (though the last two options are output behavior). IC2 currently has four EU storage blocks. Stores more EU than the sum of its components (30K). Before 2.x, used Insulated Copper Cable instead of tin in recipe.

What is power tier in IC2?

In IC2, power tier refers to a range of EU per tick (EU/t) by which blocks and items are grouped, which defines certain ways they behave. Incorrectly matching power tiers between equipment usually results in either a lack of functionality or a surplus of explosions. (Even if it's only one, any number of unwanted explosions is a surplus!)

How many items can IC2 charge?

The new and improved IC2 Charging Bench! The charging bench allows you to charge up to 12 items simultaneously! It comes and below, but not above. If you want to charge your Quantum armor you'll need high-power equipment, sadly. :) base energy storage of 40,000 EU. 1 Batbox 3 Insulated Copper Cable 1 Electronic Circuit 4 Wooden Planks

What voltage can a Tier 2 machine accept?

Tier 2 machines can accept or output medium voltage, or 33-128 EU. Tier 2 Items Tier 3 machines can accept or output high voltage, or 129-512 EU. Tier 3 Items Tier 4 machines can accept or output extreme voltage, or 513-2048 EU. Tier 4 Items Tier 5 machines can accept or output "insane" voltage, or 2049-8192 EU.

Is there such a mod that will automatically without placing any power exchangers make IC2 machines accept power such as RF/FE etc? I just noticed a mod called Tech Reborn, which is basically different IC2, and on the FTB Wiki it says "It adds many new machines, which can use Forge Energy, Tesla, Redstone Flux or Energy Units.

Industrial Craft 2 (and really only it and its add-ons) uses EU (Energy Units). In addition to the basic generation, transmission, storage, and usage; it has power tiers (voltages). If you run too much power through a lot tier cable, then the cable burns up. If you run too high of a voltage into a machine, it blows up.

They convert IC2 power (EU) to Buildcraft power. The advantages of using IC2 power is that all you need is one power source, not several different kinds. Also, you can actually store EU; with BC power you cannot. One energy link will power a ...

IC2 power questions . I have a simple power system - 30 tier 1 solar panels feeding into an MFSU. ... The transformer takes it in and throws out one 128 EU packet, and holds the other 3 in the internal storage. The

128 EU packet then goes to the LV transformer, which splits it into four 32 EU packets. 1 of those packets goes to the batbox ...

Did the IC2 advanced power system ever actually make it to a publicly acceptable state? I remember it being a config option you had to intentionally toggle on back a couple years ago because it was so ridiculously buggy and slow that it was impractical to ever use in normal play. ... better power storage etc. Mekanism is a one-mod solution to ...

Here's a more detailed description of how power works in IC2. Power is sent in packets every tick to machines that need it. The size of the packets is known as the voltage, or power tier. Tier 1 = Low = 32 EU (Basic machines) Tier 2 = Medium = 128 EU Tier 3 = High = 512 EU (Kinetic Generator) Tier 4 = Extreme = 2048 EU

As far as i know, IC2 is the only mod that upgrading/speeding up your machine represents a real power draw. (even gt5u/CEu its kinda whatever since you usually unlock new generators every tier to supply you new power hungry machines, powering a 16HV machine with a 16HV generator isn't any harder than powering 16lv machines with 16lv gens). IC2 ...

Issue: Cannot get IE power to operate IC2 machines. Tried connecting in various ways using MV and LV cables/connectors directly from a MV capacitor to IC2 machines and/or storage (battbox). Will not power or register at all on the IC2 machines. I hope this is not a stupid complaint but I have tried looking everywhere for a straight forward answer.

Energy Storage Upgrades add 10,000 EU per upgrade to a machine's internal buffer. They do not increase the energy input capability of the machine, so a tier 1 machine would still only be able ...

The Multi-Functional Electric storage unit, or MFE, is a Tier 3 energy storage unit that stores Industrial Craft EU. The MFE is capable of storing up to 4,000,000 EU and accept a maximum power input of 512 EU/t, into any of its five non-dotted sides. It will also output 512 EU/t through its dotted side, that will cause tier one and two machinery to explode violently.

Batbox &gt; Universal Cable &gt; Flux Duct &gt; Refined Storage Controller . . . As a side note this is a problem you will have everytime you try to use power generators from IC2 to power almost every other mod, which is why I recommend switching off IC2 power to something else, like Steam dynamos or thermal generators - or even nuclear reactors if you ...

Yeah an IC2 mass fabricator is what I had in mind, so hypothetically IC2 is the only mod necessary to get a nuclear reactor perpetual motion machine, though you may want some mods to help with logistics and redstone. Unfortunately mods for direct conversion from EU to rf or any other mod's power system are pretty rare or outdated.

Hello again, got another program for y'all. This one should be pretty easy to setup, I've learned some things that make this more flexible. All you need is any computer (advanced or not), any ADVANCED monitor (you pick the size, and the number of monitors too), and a EU storage device(s) (MFSU, MFE, CESU or Batboxes) and this computer will figure out the total ...

sorry if i used the wrong flag to ask this but i really do not knew any other place to ask this i made a personal modpack for myself to play ic2, mekanism, refined storage, electrodynamics and assembly line machines in 1.19.2 but i can't find a way to convert EU to RF or FE in this game version, i tried to use universal cables in some machines of ic2 and it didn't worked, i tried to ...

The subreddit for all things related to Modded Minecraft for Minecraft Java Edition --- This subreddit was originally created for discussion around the FTB launcher and its modpacks but has since grown to encompass all aspects of modding the Java edition of Minecraft.

I realized that with the Highest portable storage device you are basically invincible, even if someone attacks you with a Nano Saber which is ment to be a effective counter. So it was decided that Electric Armor can no longer charge from external items. That being said you can still expland the armor power storage with the Armor Configurator.
