The article is about the number of batteries needed for a backup system in a home. It also discusses the reasons why such a system has become a necessity and also offers a comparison between batteries and generators as a backup power system. In addition, there is also a short argument in favor of pairing a solar system with a battery storage system.

I doubt you want to afford enough batteries to run the whole house for 2-3 days on battery and solar alone. You would be looking at roughly 4-5 powerwall batteries for that 2-3 days. That would be \$52k-56k. FAR cheaper and more ...

Enphase switches my house over to battery power so fast the lights don't flicker. No electronics reboot, no clocks need to be reset. If you want the best, start with that requirement. The next thing is max power output. If you want run AC, electric water heater, car charger etc off-grid and not think about the batteries, then you need a lot of ...
