Using the boost switch did nothing! It was an older unit but well used an trying to chase the battery cables was difficult. I was able to perform a voltage drop on the cables as the battery cables ran from the batteries in the rear to mid point of the coach, from there they connected to inverter, then generator an other high amp devices.

The power (primarily focused on HOUSE) goes directly to the Battery BUSS. Then, from that side...there is protection. THIS IS STANDARD FOR MONACO....at least on my Camelot (2009). The concept was also used on the later Dynasty and up... The first one or the HIGH CURRENT Dynasty...SIG 2005 is the same as the second one. ...

All battery systems require some maintenance such as checking battery hold downs and terminal tightness from road vibration, checking for terminal corrosion, checking for frayed wires and the like. We have been using AGM batteries in our race cars and show cars for over 15 years simply for protection in the event of an accident, easy to charge ...

Now you have FOUR "Batteries". Lets say.. Channel 1 Battery goes to Chassis 1; Channel 2 to Chassis 2; Channel 3 to House SET 1 (two 6 VDC in series) and Channel 4 to House SET 2. ALL HOOKED UP. ... Formerly ran the HR 419 Maintenance Session and was President of the Chapter. Dealt with a number of Monaco vendors and Monaco/HR service techs.

My battery boost is on the left of the steering wheel about knee level on the dash... My downloaded manual says: Battery Boost: The battery boost switch at the cockpit energizes the coil of the isolator relay. This connects the house batteries to the chassis batteries when chassis battery voltage is not sufficient to crank the engine.
