Bosnia and Herzegovina is a self-sufficient, net exporter of electricity. However, its energy sector relies mostly on fossil fuels, in addition to hydro and a negligible level of renewables. Bosnia and Herzegovina is well endowed with renewable energy resource potential; however, the sector is still in its initial stage of development.

Bosnia and Herzegovina. Overview: Bosnia and Herzegovina remained a cooperative counterterrorism partner, although its capacity remains limited and little progress was made on legal and regulatory reforms because of the ongoing political crisis caused by secessionist rhetoric and obstruction of state-level institutions by Republika Srpska entity leaders and ...

Bosnia and Herzegovina is between an early stage and some level of preparation in terms of capacity to cope with competitive pressure and market forces in the EU, and made limited progress in this area. The quality of education has remained low, and the country continues to lag behind in the energy and digital transition.

"By 2035, Bosnia and Herzegovina's Framework Energy Strategy provides the con-text and direction of energy development in Bosnia and Herzegovina and seeks the right balance in the context of "energy trilemma". Launching real investments, market and regulatory reforms in all segments of energy, supported by solid and structured

In 2021, the largest source of energy in Bosnia and Herzegovina was coal (51%), ... Limited Investment and Financing: The lack of financial resources and limited access to international financing may hinder the development of renewable energy projects. Attracting private investments and securing financing are crucial for the expansion of the ...
