El cobalto, tradicionalmente preferido como material catódico en la fabricación de baterías de litio-ion por su alta densidad energética, se enfrenta a la competencia del manganeso, que destaca por su seguridad y coste reducido. Aunque el manganeso es económicamente más atractivo y seguro, presenta limitaciones como menor densidad energética, pérdida de capacidad a ...

Les batteries NiMH sont des batteries rechargeables qui ont remplacé, au fur et à mesure, les batteries NiCD, en raison de l'absence de métaux toxiques mais également car le NiMH fournit 40% de plus d'énergie que le NiCD.

The following is a synopsis of the regulations contained within REACH: From 1st June 2008, manufacturers of substances, and importers of substances as such or of substances in preparations (mixtures) into the European Community (EC) and the European Economic Area (EEA), must register these substances with the European Chemicals Agency (ECHA) if the ...
