The EIC is choosing to use ice storage for its energy conservation needs. The organization has recognized the many benefits of this technology - it's efficient, it helps reduce costs and it minimizes the environmental impact of cooling. Ice storage technologies are affordable in today's market and have a plausible return on investment.

One thermal energy storage solution that has demonstrated repeated success on high school campuses is the installation of CALMAC's IceBank energy storage tanks. Their high-tech design allows each tank to store a significant amount of energy in the form of ice, and then use the stored energy to cool the school during the day.

As a result, the college saves \$200,000 annually. The prevalence of energy storage in use at schools across the country and abroad reflect just how versatile and effective thermal energy storage is for the university setting. Similarly designed venues like business campuses can also save big by integrating energy storage into daily operations. [Back](#)
