

What is cumuluspower TM?

CumulusPower(TM) is a Swiss-made Three-Phase,4th Generation Modular UPS system which offers industry leading "9 nines" availability and lowest total cost of ownership. CumulusPower TM is comprised of modules with power of 10,20,25,50 and 60 kW, which can be accommodated in single racks with total power ranging from 20KW to 600kW.

How many mw can a cumuluspower TM power rack support?

In addition, the power racks can be extended to 3,6 MW by horizontally paralleling up to 60 modules. The CumulusPower TM range is designed to protect small and mid-sized data center as well as other mission critical applications with 124% continuous operation in overload and maximum power of up to 3,6 MW.

What is cumuluspower?

Unlike traditional centralized parallel multi-module systems, the advanced Cumuluspower technology combines a unique Intelligent Module Technology (IMT), with a fault-tolerant parallel architecture, called Distributed Active-Redundant Architecture (DARA), thereby fulfilling the highest availability and reliability requirements.

Why should you choose cumuluspower TM modules?

Thanks to our long experience in module-design, the Cumuluspower TM modules are equipped with all hardware (power circuits) and all software (intelligence and monitoring) functions, which make them fully independent and capable of safely isolating themselves from the multi-module system whenever an internal fault occurs.
