

The Cogen World Coalition (CWC) aims to create and expand a global community of firms, companies, institutions and people focused and interested on cogeneration/CHP. We advocate for an efficient and sustainable use of energy.

The first thing we do is to carry out an energy audit and thereby acquaint ourselves with the current profile of thermal and electrical demand, after which the points for improvement are identified. At the same time, the thermal processes are re-engineered to increase the energy use of the cogeneration plant.

Cogent has extensive experience in the refined products space and is a shipper on the Colonial Pipeline. The Colonial Pipeline runs from Houston, Texas to Linden, New Jersey. This pipeline connects Gulf Coast refineries with markets across the southern and eastern U.S. through 5,500 miles of its pipeline system, delivering gasoline, diesel, jet ...

Martin Energy Group is a cogeneration engineering company that provides complete engineered power package solutions that will serve all your power needs. The design, engineering, manufacturing and performance of our Power Generation Systems are specifically built to meet your needs and specifications.

The 10th edition in the "COGEN World Talks" series of webinars focused on the use of cogeneration (combined heat and power) or trigeneration (combined cooling, heat and power) technologies to meet the energy needs of data centers, where digital information is stored, amended and retrieved. The webinar took place on Monday, 4 November 2024.

Combined heat and power (CHP), also known as cogeneration, is: The concurrent production of electricity or mechanical power and useful thermal energy (heating and/or cooling) from a single source of energy.. A type of distributed generation, which, unlike central station generation, is located at or near the point of consumption.. A suite of technologies that can use a variety of ...

When it comes to solar or wind for UK homes and businesses, there is no one in the industry who emphasises quality more than Cogent Energy. Every roof is different and everyone's needs are different. We go above and

beyond to provide each customer with the highest quality of service from initial consultation to installation.

Cogent Energy Systems General Information Description. Developer of an ionic gasifier technology designed to eliminate local waste and create on-site energy. The company's technology produces a clean, energy-containing synthesis gas comprised primarily of hydrogen and carbon monoxide, and free of other byproducts, long-chain hydrocarbons, and ...

COGENT Energy (CENERGY) is the business segment of Clark Electric Distribution Corporation (CEDC) being the Local Retail Electricity Supplier (LRES) pursuant to Retail Competition and Open Access (RCOA). COGENT Energy was established in order for CEDC to continue its commitment in serving the locators of Clark Special Economic Zone. It ...

NECS is a recognized leader in adapting renewable energy sources for cogeneration. These off-grid solutions meet on-site power needs with clean, energy-efficient plants that can be built or upgraded to become independent power generation facilities with revenue potential for ...

Focusing on the needs of SMUD, we designed a solution to focus on the efficient operation of the facilities. This solution included the application of our full service facility performance management technology and on-site performance ...

Today, Cogent remains a crude oil, condensate and refined products marketing company. Randy and Steve sit on the Board of Directors of Cogent, and are still actively involved in the day-to-day management and oversight of the business as they influence the strategic direction of the company and identifying opportunities in the market place.

Cogent Energy Systems | 141 followers on LinkedIn. Cogent Energy Systems" proprietary HelioStorm Gasifier(TM) is a game-changing ultra-high-temperature gasifier that reliably and efficiently converts 1-5 tons per day of virtually any type of feedstock into a clean synthesis gas -- with low capital cost, no harmful air emissions, and a very compact physical footprint. ...
