

Why do Eskom use microgrids?

Microgrids are used by Eskom as a solution to supplying green power where there are constrained networks, in rural and remote areas, to improve reliability, or as an alternative to avoid costly infrastructure. Microgrids can be a customer owned, partnership owned, or an Eskom owned site.

How many microgrids will Eskom have in 2024?

Eskom plans to roll out about 100 microgrids across the country by the end March 2024 as part of the Distribution business strategy," said Distribution Group Executive, Monde Bala. Apart from the microgrids being cheaper, they also contribute in reducing carbon emissions because they use renewable energy sources.

Who can contact Eskom for a microgrid installation?

Rural community leaders are invited to contact Eskom, so that their community may be considered for a microgrid installation. Any commercial or agricultural concern who want additional power on an existing line or any nature conservation facility is encouraged to make contact.

Does Swartkopdam have a microgrid?

The microgrid technology at Swartkopdam will provide electricity to 39 households who did not have access to electricity prior to this project. The electricity networks around the area are constrained and practically impossible to extend and connect the area.

Does Eskom provide green energy to uplift a community?

Together with supplying green energy to uplift a community, Eskom also takes the energy education of the residents very seriously. Residents are briefed on the safe use of electricity, what to do in case of a contact incident and how to use microgrid electricity sparingly to avoid overloading the system by using too much at one time.
