

What is Curacao's energy policy?

In 2009, Curacao developed an energy policy document, which sets out general guidance and governing principles for further study of energy issues.⁴ It suggests the goal of reducing energy consumption by 40% by 2020 and encourages the investigation of combining wind power with storage to provide 100% of the island's energy needs.

Why does Curacao use wind energy?

Curacao's long history with wind energy has provided it with valuable experience in integrating variable energy resources into the electrical system while also demonstrating the value of avoiding petroleum-based electricity generation.

How will a battery energy storage system benefit Curaçao?

The implementation of a Battery Energy Storage System will allow Curaçao to collect energy from renewable sources such as wind and solar energy and store it using advanced battery storage technologies. This stored energy can be released to mitigate the intermittency of wind power and ensure grid stability.

Does Curacao need electricity?

Like many island nations, Curacao is highly dependent on imported fossil fuels (more than 95% of the island's electricity is generated using petroleum-based fuels), leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity.

How many wind turbines are there in Curacao?

Curacao features two of the oldest but most productive wind energy installations in the Caribbean. The first installation, a 12-turbine, 3-MW facility, was placed in service at Tera Kora in 1993.¹⁵ This was followed by an 18-turbine, 9-MW installation at Playa Kanoa in 2000.

Does Curacao export oil?

*Most of Curacao's oil imports are feedstocks for the island's large, export-focused refining operation. The net export value of petroleum products totaled 14.0% of GDP in 2012. The electric utility for Curacao is the Curacao Water and Power Company, more commonly referred to as Aqualectra.
