In Part 1 of our Veeam Backup Maintenance series, we took a look at how we can leverage Storage-level corruption guard to auto-heal and repair our storage blocks that become corrupt either by re-hydrating data from ...

VBK -- full backup file. VIB -- incremental backup file. VBM -- backup metadata file. The backup metadata file is updated with every backup job session. It contains information about the computer on which the backup was created, every restore point in the backup chain, how restore points are linked to each other and so on.

Using Veeam we can have various types of files. But do you know all of those file extensions? Here is a list of the main files: .vbm - backup chain metadata file. vbk - full backup file. vib - incremental backup file. vrb - reverse incremental backup file. bco - configuration backup file. lde - veeam explorer exported file. ldf - Microsoft SQL Server Log file

Spousta firem nabízejí tzv. „full back-up“ neboli zlohu celého domu. Co? je v 99 % případů naprosto nesmysl. V rodinných domech jsou nejvíce používány ty hybridní, asymetrické; stáda o výkonu 10 kW.

A konečně nejdokonalejší variantou je tzv. "plná zloha" (full backup), kterou lze obnovit z baterie. Co se musí vydat? ve, ne? se zapojí plná zloha? ...

A full backup contains a copy of the entire database including used data pages and the log files written during the backup. A full backup doesn't truncate the transaction log. To restore the database, you always need a full backup. In other words, you cannot restore a differential backup or a transaction log backup without a full backup. A ...

To periodically compact a full backup, select the Defragment and compact full backup file check box and specify the schedule for the compact operation.; During the compact operation, Veeam Agent for Microsoft Windows creates a new empty file and copies to this file data blocks from the full backup file. As a result, the full backup file gets defragmented, and ...
