

How many people in Djibouti have access to electricity?

In Djibouti, 42% of the population has access to electricity. The government's Vision 2035 establishes goals to promote renewable energy source use for electricity generation and to pursue fuel-switching measures from fossil to renewables.

What are the main sources of energy in Djibouti?

Traditional biomass fuels, petroleum products and electricity have a significant share in the country's energy mix. AFREC 2020 energy balance shows that the total primary energy supply in 2018 was 457 ktoe. Djibouti has no indigenous sources of oil, natural gas, hydropower or coal.

How can Djibouti achieve its energy goals?

Djibouti's substantial potential for geothermal electricity generation, along with its rising capacity to produce energy from wind and solar power plants, should help the country reach its goals in coming years. In addition to the growing need for generation capacity, the expansion of renewable energy is key for Djibouti to diversify its economy.

How much electricity does Djibouti produce in 2021?

Djibouti produced 654,062 MWh of electricity in 2021, according to figures from the Central Bank of Djibouti, representing a 4.3% increase relative to 2020. Improving domestic energy production will require the government to direct private investment towards electricity generation.

How is Djibouti reducing its dependence on imported power?

Djibouti is also working to reduce its dependence on imported power by investing in domestic production and diversifying its energy mix. The government has ambitious plans to become the first country in Africa to fulfil 100% of its electricity demand from clean energy sources while also extending the power grid to reach 100% of the population.

How does electricity supply work in Djibouti?

Electricity supply services are provided through the vertically integrated utility Electricité de Djibouti (EDD). A small amount of additional energy is generated by a solar plant (300 kW capacity). Djibouti has wind and geothermal generation potential and is actively studying these options. [citation needed]

In its bid to become the first country on the continent to produce 100% green energy by 2035, Djibouti can also draw on other ambitious projects. These include the solar power project in the Grand Bara desert, for which work began in 2020. This voltaic power station will have a capacity of 25 MW, with the possibility of
