If you want the battery to be discharged during a particular time interval, you can set the battery profile to savings mode and set the tariff to peak hours from 12:00 AM to 7 AM or any time interval. For further understanding please refer to the battery profile link below:

If your system doesn't automatically resume providing backup power after sunlight returns, you will need to manually restart your IQ Batteries. The restart process depends on your IQ Battery model. To check your IQ Battery model, open the Enphase App, and then tap Menu > System > Devices > Battery. How to restart IQ Battery 5Ps

Enphase battery cost. Based on our industry research, an average-sized system that includes two Enphase IQ 5P batteries should cost around \$15,000 before incentives. Enphase IQ batteries also qualify for the federal clean energy tax credit that can reduce that cost by 30%, as well as other state solar battery incentives.

Hello. I'm interested in getting batteries for my solar panels. Initially we were under the impression that we were getting them at time of purchase but were misled. How many batteries could/should I get to stay powered for a full day, and how much would that cost? Thank you.

I was on "Self-consumption" profile overnight with 40% battery limit. As expected, it dropped to 40% overnight, and switched over to grid power. However, when daylight came, the battery did not recharge, even though the solar panels were providing several kW of surplus power. So I switched over to "Full Backup" in hopes that the battery would recharge overnight, but it ...
