

Elon 100. The Elon 100 is connected to the geyser element and thermostat. When the solar modules are producing electricity, the Elon 100 feeds this into the geyser element to heat water, until the water reaches the temperature setting on the thermostat. Depending on the Elon 100 efficiency setting (see Section 3.3) or when the user presses the ...

The PowerOptimal Elon™; operates on a very simple principle: it enables direct current (DC) electricity produced by solar PV modules to be used directly for water heating using a standard electric geyser with alternating current (AC) heating element and AC thermostat. The Elon can run completely off-grid, or with grid AC power as backup.

This video is for new Elon ™; 100 units from September 2019 onwards. See this page for a user instruction video for the old Elon ™; 100 up to August 2019. (How do I know if I have an old or new Elon ™; 100? The controller for the old version says "Efficiency" below the dial (knob), whilst the controller for the new version has "Turn anticlockwise to increase solar hours" below the dial.)

The innovative PowerOptimal Elon 100 incorporates proprietary solar PV (photovoltaic) power management technology to allow for direct solar PV DC to electric geyser power provision and switching and optimised solar power use in a single compact unit. This kit is suitable for a 3 to 4 person household - 150 - 200ltr geyser.

The Future of Hot Water, Today SAVE MONEY NOW The Elon Smart Water Solution transforms coal-fired electric geysers into smart, solar PV-ready, green appliances. Real-time monitoring and communication deliver actionable data. This provides ecosystem stakeholders with the necessary insights to support decision-making and proactive management & service delivery.
