Therefore, energy storage will make the electricity system more flexible, resilient and cost-efficient, and is a prerequisite for the green transition. With lead times of 1-2 years from project start to finalization, energy storage is also a fast way to strengthen the system.

energy storage technologies for grid-scale electricity sector applications. Transportation sector and other energy storage applications (e.g., mini- and micro-grids, electric vehicles, distribution network applications) are not covered in this primer; however, the authors do recognize that these sectors strongly

Adiabatic compressed air energy storage (A-CAES) was chosen as the targeted EES technology investigated, as it satisfies the functional requirements of grid-scale usage. More importantly, A-CAES does not rely on fossil fuels such as natural gas or coal, and thus will not be an additional source of pollutant emissions.
