

Can Faroe Island achieve 100% energy independence?

The achievement of the 100% energy independence in the remote insular systems of the Faroe Islands is proved to be a real challenge. The topos of Faroe Island is truly blessed with abundant wind and hydrodynamic potential and excellent sites for PHS installations, integrated in a breath-taking, majestic landscape.

What is the energy potential of the Faroe Islands?

Faroe Islands exhibit high wind and hydro potential. Electricity, heating and onshore transportation needs are considered in this work. RES annual penetration higher than 90% can be achieved. Wind parks, p/vs and pumped storage systems are the most feasible technologies. RES penetration above 95% requires smart grid integration concepts.

How is energy produced in the Faroe Islands?

In the Faroe Islands, energy is produced primarily from hydro and wind power, with oil products being the main energy source. Mostly consumed by fishing vessels and sea transport.

Are there renewables in the Faroe Islands?

"In the Faroe Islands, we are blessed with renewables: we have wind, hydro and some sun in the summer; we also have tidal and wave power where we can see great potential," says Nielsen. Since announcing its green vision in 2014, SEV has already done a lot to increase the share of renewables in its energy mix.

Is offshore wind power a development preference for the Faroe Islands?

In the case of the Faroe Islands, offshore wind power was not directly evaluated for development preference. However, in narrative analysis offshore technologies were suggested to be preferable to onshore technologies.

Will the Faroe Islands use more green energy in 2025?

Even more conservative scenarios predict that the Faroe Islands' current electricity consumption of approximately 350,000 MWh per year will increase to approximately 450,000 MWh in 2025. "The current discussion recommends using more green energy and especially the potential for wind energy is quite high," says one of the islanders.
