

What is a modular system?

Modules can be used effectively for modification of existing buildings e.g. roof top extensions. Modular systems can be used for all types of residential building, and 75% of all buildings in Europe are used for domestic purposes.

What is a modular building?

Modular systems can be used for all types of residential building, and 75% of all buildings in Europe are used for domestic purposes. With inventive architectural design, modular construction is extremely versatile and satisfies all the requirements of modern buildings.

Which modular systems are studied during the modcons project?

The modular systems studied during the MODCONS project are 4-sided modules with load bearing longitudinal walls, with closely spaced wall studs. Therefore, the guidance in D1.6 is primarily aimed at this type of construction.

What are the potential new markets for modular construction?

The potential new markets for modular construction arising from this research could be up to 30 million Euros per year for the SME partners. The route to market is based on a greater realisation of clients of the benefits of modular construction and the ability of the modular industry to deliver a range of solutions using standardised components.

What is the future form modular system under lateral loading and seismic actions?

Report D3.1 of MODCONS addresses the behaviour of the FutureForm modular system under lateral loading and seismic actions. The analysis is based on a finite element model using the program, ANSYS, in which 4 and 8 storey building using 3 dimensional modules were analysed under various loading scenarios.

Should modular systems be used to address construction needs in the future?

There are good reasons for an optimistic view on increased use of modular systems to address construction needs in the future. Since the start of the MODCONS project, the housing sector has started to expand following the recession. Therefore, the potential market for the developed modular systems in during the MODCONS project is expected to grow.

Features. Wall system includes aluminum frames, insulation, finished wall panels, extrusions, and glass panels. Height and width of wall frame and finish panels are dimensionally parametric dependent on substrate material and specified finish.

GRID is the ultimate flexible interior system. Designed and produced in Denmark for clients worldwide. With its unprecedented adaptability, components from the GRID collection can be combined for a beautiful and

functional solution, no matter where or how. A truly modular system for architects and designers to play with - indoors and outdoors.

In Finland, most of the volumetric modular system construction is currently carried out with solid wood CLT elements, but the elements can also be implemented as a rigid structure. ... In a solid wood volumetric modular system, the walls and the roofs are typically formed of CLT panels. The floor of this element, i.e. the load-bearing subfloor ...

Manufactured in 5 months, in 3.5 months on site, 16 floors, Highest modular building in the Netherlands . 172 hotelrooms Hotel Jakarta Amsterdam Java-eiland. Manufactured in 2.5 months, in 13 ...

The Finnish Defence Forces will acquire a modular 120 mm mortar system from Patria. The procurement involves a pre-series of the new mortar system, set for delivery to the Finnish Army in 2025. The new mortar system integrates traditional heavy mortar weapons into a modular carriage, which is then mounted on a military truck.

DMT Modular builds using industrial, modular and 3D systems. Buildings are fabricated ready for assembly in modern production facilities regardless of weather conditions. The room modules are installed on site flawlessly and noiselessly. This reduces construction period compared to traditional construction methods, and

delivery is guaranteed by ...

Milrem Robotics is the world's leading robotics and autonomous systems developer and systems integrator, with offices in Estonia, Finland, Sweden, the Netherlands, Poland, the US, and the UAE. The company is known for its THEMIS Unmanned Ground Vehicle (UGV), Type-X Robotic Combat Vehicle (RCV), and MIFIK I--the autonomous functionalities kit.

Danish Modular Systems also manufactures and sells modular building solutions in Africa through its subsidiary DMS-Africa Ltd. We are, therefore, able to service our customers with modular building solutions wherever they need them and always from a factory close to the delivery location to minimise the logistic cost and to provide a best value option.

Helsinki, Finland - The Finnish Defence Forces have announced the acquisition of a new advanced modular 120 mm mortar system, known as TREMOS, from domestic defense contractor Patria. Described as a "mobile version of traditional mortar," TREMOS is set to enhance the capabilities of Finland's combat support operations.

Information Systems Management - Understanding Modular Approach . Seppo J. Sirkemaa . University of Turku, Pori Unit, Finland . Email: seppo.sirkemaa@utu . Abstract--Information systems management in an ongoing process. There is a need to map and evaluate technological innovations and evaluate whether they should be adapted to the ...
