In 2021, final energy consumption in France reached 138.4 Mtoe, 5% below its 2000 level and 6% above 2020 level, while tactivity measured in terms of GDP has increased by 26%. Transport is still the largest consuming sector with a share of 31% in total final energy consumption in 2021 as well as in 2000, the base year. Over the

The law on energy transition for a green growth, as the bill is called, also targets to halve the country's overall energy consumption by 2050, decrease the share of nuclear energy in the energy mix to 50% by 2025 and lower the share of fossil fuels by 30% by 2030. Progress will be measured against the 2012 levels.

Electricity bills for millions of households in France are set to drop by around 10% to 15%, as global energy prices continue to fall. Households on the standard regulated electricity tariff (tarif bleu) with EDF will see price falls when the bi-annual re-evaluation of rates comes into force in February 2025. Those on other contracts, which are not tied to a regulated ...

By energy type, France committed at least USD 17.58 billion to oil and gas ... to EUR 5000 for professional use vehicles aid to support individuals that seek to purchase electric vehicles and EUR 2000 for hybrid vehicles. Other key goals include the aim to produce a million clean vehicles by 2025 while delivering 100,000 electric charging ...

France plans to decrease its final energy consumption from over 1.8 petawatt-hours in 2021 to approximately 1.5 petawatt-hours in 2030. According to the country's 2030 energy transition targets ...

In 2023, electricity prices for non-household users in France with an annual consumption between 500 and 2,000 megawatt-hours stood at 23.3 euro cents per kilowatt-hour, the highest figure of the ...

France: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key ...

L'année 2000 a été de nouveau une année globalement satisfaisante du point de vue de la maîtrise de l'énergie : la consommation totale d'énergie primaire, de 257,6 Mtep ...
