The origin of photon energy loss (E loss) behind high open-circuit voltage is investigated for ternary polymer solar cells. Adding a small amount of nonfullerene acceptor to fullerene-based binary devices significantly suppresses E loss while maintaining the recombination center of polymer/fullerene interface. This is due to reduced radiative and ...

En Martinique, l'électricité est presque entièrement produite à partir de ressources fossiles. Moins de 10 % provient de l'oléon et du photovoltaïque. Pour augmenter la part des énergies renouvelables dans son mix, l'énergie s'améliore son réseau.
