My understanding: When connecting panels of different volts/amps, one or the other will be reduced. - A string of panels that have the same amperage is good, and the voltages will add together.If the amperages are not the same, all panels will be reduced to the amperage output of the lowest panel. Example: 5v@10A + 25v@10A + 100v@5A == 130v@5A, since ...
