The plant consists of approximately 20,320 crystalline silicon solar panels on single-axis trackers, with a total nominal capacity of 5 Megawatts (MW). It is targeted to inject over 12,000,000 Kilowatt-hours (KWh) into the national grid each year, corresponding to the average energy consumption of roughly 10,000 households.

3 ???#0183; The results were promising. Using simulation models, the scientists found that combining photovoltaic plants with olive plantations boosted overall productivity. The solar panels provided shade and wind protection for the crops, increasing agricultural yields. At the same time, the plants' natural evapotranspiration cooled the solar panels, improving their efficiency.
