

The Isle of Man made a significant contribution to the Second World War and one of its most important installations was on the land around here. ... at all the other 180 Chain Home stations around the coast of Britain. Each Chain Home operation overlapped with its neighbour to ensure that as aircraft progressed they were never out of radar ...

In 1982 Tynwald appointed a Commission to examine the amalgamation of the Douglas Corporation Electricity Department and Isle of Man Electricity Board. The Commission reported in May 1983 in favour of the establishment of a single authority for the whole island. The Manx Electricity Authority was established in July 1983 to develop and maintain an efficient and economical system of electricity supply for the Island. Its legal position was established by the E...

The Manx Electricity Authority (MEA) has constructed a combined cycle gas turbine power station at Pulrose on the Isle of Man. The structure includes a 75m tall flue stack and 30m high glass wall (turbine hall) that allows the generation process to become visible.

Balancing the Isle of Man's electricity network requires stabilising power; this cannot be provided from sources which are reliant on the weather to produce electricity as these sources cannot be guaranteed at all times. In all scenarios the most cost-effective solution of providing this stabilising power is a new interconnector to the UK ...

Isle of Man Energy's recent 16% cut in tariffs will still mean its unit rate is 83% higher than it was in summer 2021. Manx Utilities says Tynwald's loan approval does not extend beyond March and anyway, using the £26m loan now to reduce tariffs would only lead to higher tariffs and costs overall in the longer term.

Power on the national grid system is sold differently (ignoring pre-planned deals and contracts) power can be purchased in half hour chunks, and each half hour chunk could very well be a different price. By that i mean power sold at 3pm to 3:30pm will be one price, and power sold at 5pm to 5:30pm will be at a higher price.

The loan will help pay for gas to fire the island's main power station in Pulrose A six-month Isle of Man electricity price freeze will allow 'more manageable' increases to be introduced next year ...

Santon and Mount Murray was hit with another power cut last night. The area was plunged into darkness at around 11pm and power was restored at around midnight. It's the third power cut in the past week and the

fourth this month. Manx Utilities hasn't said what's causing the issue in the area.

A huge power outage last night is causing more problems for residents today. Mount Murray, Santon and Richmond Hill were plunged into darkness last night at around 11pm. But today the National Sports Centre ...

Power Stations are situated at Pulrose, Peel, Ramsey and Sulby. Pulrose, including the CCGT, has a capacity of nearly 135MW. Peel has a capacity of nearly 40MW, a diesel generating station at Ramsey has a capacity of 3.6MW, and a small hydro station at Sulby has a capacity of 1.0MW. Network Services

The Authority is responsible for providing customers with safe, reliable, efficient and economic supplies of electricity, natural gas and clean water; as well as processing waste water. Manx Utilities has two subsidiary businesses on commercial telecommunications and subsea cable management. Manx Utilities Authority is responsible for the generation, transmission and dis...

The Chief reiterated that the Isle of Man Government can get a renewable energy onto its system, keeping in mind a ten year time line before the power station gets "switched off". He added: "We're likely to have a multi layered future in front of us, with a number of potential renewable sources supplying our future needs."

A power outage hit Santon and Mount Murray last night. The area was plunged into darkness at around 11pm and the electricity went off and on again throughout the night. Manx Utilities says they sent engineers to fix the issue and restore power quickly. It follows a previous power outage in the same area on November 9.

In this context, research collaboration between Manx Electricity Authority (MEA) and Cranfield University has been carried out since 2001 and a series of technologies and software have been and are still being developed at Cranfield University and some of them have been integrated into MEA Combined Cycle Gas Turbine Power Plant in Pulrose, Isle ...
