

What is trackso solar?

TrackSo Solar is a cloud based energy management IoT platform to track your solar PV system's performance, identify anomalies and provide immediate support, giving you a full control over your system without actually being present there.

How does trackso monitor a solar thermal system?

TrackSo provides performance based monitoring for Solar Thermal Systems. How do we collect data of a Solar Thermal System? A temperature probe is attached to : Controller is connected to monitor the pump.

What is trackso & how does it work?

Be the first to get notified of New Products, Services and Platform Updates. TrackSo is an IoT based SaaS product of Free Spirits Green Labs Pvt. Ltd. TrackSo monitors & manages energy assets to provide you with optimised information, hence allowing you to derive key business outcomes. Product is live since 2017.

The Solar Radiation Sensor, or solar pyranometer, measures global radiation, the sum at the point of measurement of both the direct and diffuse components of solar irradiance. The sensor's transducer, which converts incident radiation to electrical current, is a silicon photodiode with wide spectral response.
