

What is Laos energy security?

Laos Energy Security (LES) is a part of the U.S. Government's initiative: "Enhancing Development and Growth through Energy" (CLEAN EDGE Asia). CLEAN EDGE Asia supports expanded access to energy, promotes energy diversification and trade and integration of clean energy markets, and strengthens energy security throughout the Indo-Pacific region.

Does Laos have a solar power plant?

In addition to hydropower, Laos has also been exploring other renewable energy sources, such as solar and biomass. The country's first large-scale solar power plant, with a capacity of 10 MW, was commissioned in 2018, and several other solar projects are currently under development.

How did infrastructure improve in Laos?

Nevertheless, infrastructure did improve for the first time in Laos as French colonists constructed Route nationale 13, linking Vientiane with Pakse and the road continues to remain the most important highway in Laos today.

Why is Laos a good hub for regional power trade?

The country's strategic location, combined with its abundant hydropower resources, makes it an ideal hub for regional power trade. In fact, Laos currently exports around 70% of its electricity to neighboring countries, and this figure is expected to rise in the coming years as more hydropower projects come online.

How much power does Laos have?

With the Mekong River running through its territory, Laos has the ability to generate up to 28,000 megawatts (MW) of electricity from hydropower, making it the "Battery of Southeast Asia." Currently, the country has around 6,000 MW of installed hydropower capacity, with plans to increase this to 14,000 MW by 2030.

The Laos-Australia Sustainable Energy Partnership (LASEP) aims to support a more sustainable, reliable and profitable energy sector in Laos. This will advance Laos' National Socio-Economic Development Plan, moving towards a Green Economy and supporting Laos' ambitions to achieve net zero by 2050. Laos, Australia and ASEAN are working together to ...
