Are LFP cells cheaper than NMC cells?

These packs and cells had the lowest global weighted-average prices, at \$130/kWh and \$95/kWh, respectively. This is the first year that BNEF's analysis found LFP average cell prices falling below \$100/kWh. On average, LFP cells were 32% cheaper than lithium nickel manganese cobalt oxide (NMC) cells in 2023.

Will lithium-ion battery pack prices go up in 2023?

Lithium-ion battery pack prices have gone up 7% in 2022, marking the first time that prices have risen since BloombergNEF began its surveys in 2010.

Is LFP cheaper than NMC?

LFP is now just less than 1/3 (32%) cheaper than NMC. Another interesting aspect of the changing dynamic from 2022 to 2023's edition of the BNEF survey is that although LFP is a lower cost cathode chemistry than NMC, the portion of lithium carbonate used in its production is much higher than it is in NMC.

Can things like this be added to an existing solar+battery system? If so, how does that work? In my example, it would be adding something like [https://a /d/aHvHaEP](https://a/d/aHvHaEP) to a Generac Pwrcell system. The price difference to expanding my existing Generac battery is enormous. \$1700 for 7.68kWh versus \$1600-\$1900 (best case) for 3kWh (plus labor).
