

Who is the sole purchaser of electricity projects in Mexico?

The sole purchaser of electricity projects in Mexico would be the CFE. There is no procedure for the continuation of operations of existing power generators upon the cancellation of permits and PPAs. All projections by private analysts consider that the CFE would not be able to supply 54 per cent of the overall demand.

Is there a gridlock in energy development in Mexico?

In Mexico, there has been a gridlock in the investment and development of new mid/large scale renewable and clean energy projects by the private sector throughout the country.

Can a private power generator continue to produce energy in Mexico?

Under new PPAs to be drafted by the CFE, existing private power generators may continue their activities (capped at 46 per cent of the country's total production) but would only be able to compete in the sale of their output to the CFE. The CFE shall generate at least 54 per cent of the overall energy in Mexico.

Mexico. A general view of Mexico's solar market performance. In 2010, Mexico's renewable energy capacity was a cause for concern. Ten years down the line, the country's solar capacity has hit the roof. At the end of 2020, the North American nation's capacity was ...
