

Does Montenegro have a national energy and climate plan?

Montenegro is still finalizing its draft National Energy and Climate Plan (NECP). Montenegro has not defined the 2030 climate target in its national legislation, nor in the draft NECP. It should align with the 2030 targets set by the Energy Community. There is a legal basis for the national inventory system.

Does Montenegro have an energy efficient home?

In 2023, the project Energy Efficient Home continued to support households to purchase heat pumps with interest-free loans. Montenegro is still finalizing its draft NECP, which must harmonize the 2030 energy efficiency targets with the 2030 targets set by the Energy Community.

Will Montenegro adopt a renewable based district heating system?

Montenegro finalized the adoption of a complete package of updated energy labelling rulebooks, as incorporated into the Energy Community legal framework by the 2022 Ministerial Council. The Zabljak municipality is exploring options for establishing a renewable-based district heating system.

Why should Montenegro focus on implementing the electricity integration package?

Montenegro should focus on the transposition and implementation of the Electricity Integration Package as a precondition for the coupling of its day-ahead market. Montenegro progressed with amendments of the Energy Efficiency Law and new labelling regulations.

Will the Ionian Adriatic Pipeline bring natural gas into Montenegro's energy mix?

The Ionian Adriatic Pipeline project with PMI status could introduce natural gas into the energy mix of Montenegro. The project has not matured in the recent past. Montenegro is still finalizing its draft National Energy and Climate Plan (NECP). Montenegro has not defined the 2030 climate target in its national legislation, nor in the draft NECP.

How has Montenegro progressed?

Montenegro progressed with amendments of the Energy Efficiency Law and new labelling regulations. Montenegro should submit the draft NECP to the Secretariat with a targeted approach to coal phase-out. A draft Law on Information Security transposing the NIS2 Directive was drafted in 2023. It should be adopted in the next reporting period.

Montenegro: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive

version. Energy is a large contributor to CO₂ - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Deep learning (DL) has become a key component of modern software. Training DL models leads to huge carbon emissions. In data centers, it is important to reduce carbon emissions while completing DL training jobs early. In this article, we propose GreenFlow, a GPU cluster scheduler that reduces the average Job Completion Time (JCT) under a carbon ...

Current green energy producers can be interrupted by weather conditions or necessary shutdowns and turnarounds. Hence it is hard to calculate the exact ROI of these energy plants, not to mention the environmental effects of such constructions. GreenFlow hydro plants can operate 24h/day and 365 days/year after its installation in a river
