

Why is electricity so low in Myanmar?

The electrification rate is especially low in rural villages, which are mainly not connected to the power grid. Wood and biomass are used as a primary source of energy in these areas. Myanmar has abundant energy resources, particularly hydropower and natural gas.

Does Myanmar have a power plant plan?

Myanmar's yearly plan for the construction of power plants from 2018 to 2022 (Table 12.2) mostly covers gas-based power plants (including liquefied natural gas), along with some hydropower and solar power plants. The yearly plan excludes coal-based power plants, of which the country currently has 120 MW of installed capacity.

What is the energy saving potential of Myanmar?

According to the 2015 Asian Development Bank report 'National Energy Efficiency and Conservation Policy, Strategy and Roadmap of Myanmar', electricity consumption in all sectors and achievable energy saving potential should reach 12% by 2020, 16% by 2025, and 20% by 2030.

What energy sources are available in Myanmar?

Myanmar is endowed with rich natural resources for producing commercial energy. Currently, the available energy sources in Myanmar are crude oil, natural gas, hydropower, biomass, and coal. Wind energy, solar, geothermal, bioethanol, biodiesel, and biogas are other potential energy sources.

Does Myanmar have a yearly energy plan?

The yearly plan excludes coal-based power plants, of which the country currently has 120 MW of installed capacity. Based on the Energy Masterplan of Myanmar, three scenarios are considered (Table 12.3). In this masterplan, the shares differ between scenarios.

Is Myanmar realigning to a new energy mix?

At the Myanmar Oil and Gas Society annual meeting on 24 January 2021, minister U Win Khaing mentioned that the country is realigning to new energy mix to hydropower 40%, solar 14%, domestic gas 34% and LNG 11%.
