

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

What happened to Syria's oil & natural gas industry?

Syria, previously the eastern Mediterranean's leading oil and natural gas producer, has seen its production fall to a fraction of pre-conflict levels. Syria is no longer able to export oil, and as a result, government revenues from the energy sector have fallen significantly.

Who owns Syria's natural gas?

The Syrian Gas Company (SGC)--which fell under the GPC--was the key entity in Syria's upstream natural gas operations, a position it inherited after being split off from the SPC in 2003. Syria's natural gas distribution network was managed by the SCOT.

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

How does Syria use natural gas?

Most of Syria's natural gas is used by commercial and residential customers and in power generation. Syria also uses its natural gas in oil--recovery efforts, with approximately 20% of daily gross production reinjected into the country's oil fields between 2004 and 2013.

Does Syria have electricity?

Syria also had separate entities for the generation and distribution of electricity. Syria's oil sector has been in a state of disarray since 2011. Production and exports of crude oil have fallen to nearly zero, and the country is facing supply shortages of refined products.
