

What type of power system does Honduras use?

With an installed generation capacity of 1,568 MW (2007), Honduras relies on a thermal-based power system (accounting for nearly two-thirds of its total installed capacity), which is very vulnerable to high and volatile international oil prices. [full citation needed] The generation mix is as follows:

What type of power plugs are used in Honduras?

In Honduras the residential power plugs and sockets are of type A and B. The standard voltage is 120 V and the standard frequency is 60 Hz. In Honduras, there is great potential in untapped indigenous renewable energy resources. Due to the likely long-term trend of high oil prices, such resources could be developed at competitive prices.

How many small hydropower projects are there in Honduras?

According to its promoter, Finnder, the small hydropower project Rio Blanco (50 MW) was the first small Clean Development Mechanism (CDM) registered in the World, with the first Certified Emission Reductions awarded in October 2005. Currently, there are eleven CDM-registered projects related to electricity generation in Honduras.

Does the Inter-American Development Bank support energy projects in Honduras?

Currently, the Inter-American Development Bank is contributing funds and assistance to the following projects in the energy sector in Honduras: An Energy Sector Support Loan supported through a US\$29 million credit approved in September 2008. This project will finance priority investments in transmission and support a program for reducing losses.

A serious undertaking, especially in a storm. You may have noticed the power going out for a few seconds to a minute at a time. That is because of the inclusion of "circuit breakers" at certain points along the line. In the past, a branch hitting a power line would take the whole line up to the power station out.

In 2017, the first electric power generation plant in Honduras came into operation with a capacity of 35 MW, and it is located in the western part of the country. This plant is currently delivering to the National Interconnected Grid an average of 25 GWh of electricity per month. It provides benefits such as the introduction of stable renewable ...
