

What is Qatar's energy system?

Qatar has a unique energy system. The country's infrastructure is geared towards producing and exporting large volumes of natural gas, either directly (in a gaseous or liquefied state), or conversion to liquid fuels (gas-to-liquids) and petrochemicals.

What is the Qatar energy system modeling and analysis tool (Qesmat)?

We developed a tailor-made optimization model, called the Qatar Energy System Modelling and Analysis Tool (QESMAT), to accurately capture the peculiarities of the Qatari energy system. The Arabic word 'kismet', also used in English, means 'fate' or 'destiny'. Our optimization model can be used to plan for Qatar's kismet.

How can Qatar export energy?

The most optimal way to export the gas is by conversion to hydrogen. However, in a world increasingly threatened by climate change, rapid decarbonization of global energy systems is a priority, and it is imperative that Qatari policymakers delink the national economy from energy exports over the long term.

Does Qatar have electricity and water infrastructure?

The electricity and water infrastructure in Qatar currently depends exclusively on integrated water and power plants (IWPPs), which burn natural gas to generate electricity and produce freshwater by thermal desalination of seawater. QESMAT suggests that IWPPs will continue to provide power and water in non-daylight hours (see Fig. 5).

Can Qatar rely on natural gas indefinitely?

Although global demand for natural gas is growing as it plays an important role as a transition fuel in decarbonization strategies, Qatar cannot rely on its hydrocarbon industry indefinitely. As climate change mitigation efforts grow, the world will have to reduce its dependence on all hydrocarbon fuels.

Can a population of Qatar be used to determine aviation fuel requirements?

As Qatar has transformed into an international aviation hub, with most passengers only transiting through Doha's Hamad International Airport, the total population of Qatar cannot be used to infer aviation fuel requirements. Thus, we had to follow another approach. Historical aviation fuel use data were available from the IEA.

ANTARIS SOLAR extends its activities to the Middle East. The German photovoltaics specialist, with headquarters in Bavaria, has now opened trading partnerships in the United Arab Emirates and Qatar. Waldaschaff, Germany, 11/01/2012. "Sun energy instead of oil" - this motto increasingly holds true for the world's classic "oil countries".
