

How much energy does Slovenia produce?

Slovenia generated 68.8% of its electricity with zero carbon or carbon neutral sources in 2019, dominated by nuclear power and hydroelectricity. Fossil fuels oil, coal, and natural gas contributed 61% of the total energy supply of Slovenia in 2019.

Does Slovenia use oil to generate electricity?

Following steep declines in use since 1990, Slovenia eliminated the use of oil for generating electricity in 2019. Renewable energy sources other than hydropower (e.g., biofuels, solar PV, waste, and wind) together provided 3.5% of total electricity generation in 2019.

Is Slovenia a good country for energy?

In spite of its small size, Slovenia has achieved enviable results in the field of energy. The World Energy Council ranks Slovenia as 10th in terms of energy security, energy equity, and environmental sustainability. Slovenian electricity production is already today one of the least carbon-based in the EU.

What is Slovenia's energy mix?

SLOVENIA WORLD ENERGY COUNCIL COUNTRY COMMENTARIES MARCH 2022 Slovenia has a well-diversified energy mix - 1/3 Renewable Energy Sources (RES), 1/3 Nuclear and 1/3 Fossil fuels in the structure of electricity generation. Domestic lignite represents an important element of security of supply.

Is natural gas a transitional energy source in Slovenia?

Slovenia considers natural gas as an important transitional energy source, which can contribute to cost effective path to climate neutral society by 2050, while ensuring security of supply, especially in coal regions in transition. The same applies for nuclear energy.

Is Slovenia a sustainable country?

The World Energy Council ranks Slovenia as 10th in terms of energy security, energy equity, and environmental sustainability. Slovenian electricity production is already today one of the least carbon-based in the EU. In 2016, 71% of domestic electricity production came from low-carbon sources (the EU average is 58%).
