

The state of charge of the battery $SOC(t)$ at each moment of time t is a measure of the state of the battery storage system. The battery storage system operates according to its maximum charge SOC_{max} and minimum SOC_{min} . The charge energy of the battery can be expressed in terms of $E_{ch}(t)$ and the discharge energy in terms of $E_{disch}(t)$.

High upfront cost: Solar batteries are expensive to install. While standalone solar panels cost about \$18,000, a solar plus storage system will cost closer to \$30,000 (or more!). **Longer payback period:** Solar panels typically pay themselves back in 12 years or less.

Solar plus storage solutions are evolving from a niche market to a large market. Growing exponentially, 25 GW of battery storage projects exist presently with roughly 77% under development. According to a study made by Bloomberg New Energy Finance (BNEF) in 2018, almost 4 GW of battery storage systems went online, and by 2020 this number
