of solar irradiation, Uzbekistan has huge potential to deploy solar photovoltaic (PV) as well as concentrating solar power (CSP) which uses solar rays to heat a fluid that directly or indirectly runs an electricity generator. In fact, solar thermal is already used in a number of countries benefiting from levels of solar insolation similar to those

of solar energy in Uzbekistan, the report presents a roadmap for solar energy by 2030. It provides examples of international best practices in solar energy deployment from IEA member and association countries.

Innovations in solar heating and cooling systems are also explored, showcasing how solar energy can be utilized beyond electricity generation. These systems are designed to reduce dependency on traditional energy sources, offering eco-friendly alternatives for temperature regulation in residential and commercial settings.
