

Solar energy is making inroads into North Korea's power sector as residents are looking to install panels to have the lights on, at least partially, as the regime is failing to supply ...

In this installment of our series on North Korea's energy sector, we move away from official and commercial uses of solar and seek to understand the growing use of solar power for personal energy consumption in a country where its people still suffer from an unreliable power supply nationwide.. Data from recent interviews of North Korean defectors corroborate an ...

Solar energy is making inroads into North Korea's power sector as residents are looking to install panels to have the lights on, at least partially, as the regime is failing to supply its ...

Examination of potential wind energy resources in the nine administrative provinces over three years (2013, 2014, and 2015), as well as for North Korea as a whole (Table 5), showed the three-year mean wind energy resource potential of North Korea to be about 3.44 kWh m⁻² d⁻¹, which, unlike solar energy resources, exceeds that of South ...
