EIG ePLB C020b Thank you for the reply! I looked up the EIG batteries; it looks like EIG is long gone? I'm in the US, and I didn't see much around here. With the motor voltage: I've been using nominal voltage for everything. Is the recommended voltage based on max voltage? (apologies if this is a silly question)

EIG is a wholly owned subsidiary of DRB Holding Co., Ltd., a major Korean automotive and industrial tier-1 supplier. Founded in 1945 with the original name of Dongil Chemical Industrial Company, and then eventually Dongil Rubber Belt, DRB has growing revenues of more than USD\$700M in 2013 from nine regional offices and five manufacturing ...

The lithium-ion polymer cells used in this study were EIG ePLB C020 lithium-nickel-manganese-cobalt-oxide-based cathode and graphite-based anode with 3.6 V nominal voltage and 20 Ah capacity. Figure 6 shows the test equipment using in this study, namely a Digatron charge/discharge cyler, a computer with Digatron Battery Manager 4 ...

In particular, nine NMC pouch cells manufactured by EIG, model ePLB C020B, have been tested for 2 years. The cells have a nominal capacity of 20 Ah, a voltage range between 3 and 4.15 V, a maximum charge current of 20 A and discharge current up to 60 A. The manufacturer declares more than 3000 equivalent cycles at 20 C with DoD 80%.

In electric naval applications, battery storage management plays a key role. The second-life battery use is a fundamental part of the sustainable development of these waterborne transport systems.

The battery cell used in this study was the ePLB C020 battery (capacity of 20 Ah), fabricated by EiG Corporation, Korea. ... An analysis of the passive cooling management of the ePLB C020 battery cell by heat pipes was studied in this paper. A one-dimensional approach composed of a 1D computational model of the battery connected to a thermal ...
