

Who is hexagon energy?

Over the past 13 years, the principals of Hexagon Energy have developed and financed over 6,500 MW of energy, representing over \$1 billion USD in invested capital. We bring this experience and insight to every project. We pursue the best opportunities across all new energy technologies, building a diverse and balanced portfolio.

What happened to Syria's oil & natural gas industry?

Syria, previously the eastern Mediterranean's leading oil and natural gas producer, has seen its production fall to a fraction of pre-conflict levels. Syria is no longer able to export oil, and as a result, government revenues from the energy sector have fallen significantly.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

How is hexagon transforming biopower?

Hexagon is exploring advances in technology that are creating new opportunities for biopower. Geothermal energy has the ability to provide consistent base load power with a small footprint. Because of this, geothermal power is forecasted to be one of the fastest growing sources over the next 25 years.

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

What is hexagon wind energy?

With roots in the wind industry dating back to 2002, the Hexagon team has developed over 6,000 megawatts of wind energy. Hexagon is targeting emerging technologies, sites, and approaches that can yield higher production at lower cost.
