

Why are US tariffs on solar panels coming to Southeast Asia?

U.S. trade officials announced on Friday a new round of tariffs on solar panel imports from four Southeast Asian nations after American manufacturers complained that companies there are flooding the market with unfairly cheap goods.

Should the US impose new tariffs on solar imports?

The U.S. already collects an array of duties on solar imports. Not all U.S. solar manufacturers want Commerce to impose new tariffs on solar imports. Companies setting up panel factories, for instance, rely on low-cost solar cells from Southeast Asia to assemble into panels in the U.S.

Why did the US impose new anti-dumping tariffs on solar panels?

The US has imposed new anti-dumping tariffs on solar panels imported from Southeast Asia, tightening restrictions on Chinese manufacturers accused of using these countries to avoid fair trade rules.

Are tariffs hurting solar projects?

Many U.S. panel plants are owned by large China-based manufacturers. Solar project developers also worry that tariffs will hurt their business by driving up the cost of panels, which are already more expensive in the U.S. than anywhere else in the world.

When will the US Commerce Department finalize tariffs on solar panels?

The US Commerce Department's final determinations are set for April 18, 2025. The International Trade Administration will finalize its determinations on June 2, and final orders are expected a week later. Read more: [US to restore tariffs on solar panels from China](#)

Are Southeast Asian solar panels due to a duty-free tax bill?

The bill may soon come due for millions of Southeast Asian solar panels imported duty-free into the US that haven't been installed by a Dec. 3 deadline.

This means there will be higher prices on key materials needed to make solar panels at a time when solar is the fastest growing source of ...

The introduction of new tariffs on solar panels imported into the US brings with it a wave of repercussions that can reshape the solar industry. Given the urgency to transition to renewable energy sources, the increased cost of solar panels can deter consumers and businesses from investing in clean power solutions. As tariffs increase, solar ...

The determination marks an early victory for domestic panel makers, who say cheap imports are harming their operations and threatening investments meant to cultivate a U.S. solar supply chain. They asked the government to impose the duties, arguing the equipment benefits from unfair foreign subsidies and is being sold at prices below the cost ...

Impact on U.S. solar cell manufacturing. Polysilicon is refined, formed into ingots, sliced into wafers and manufactured into cells. Solar cells are then assembled in a frame and - ta-da! - a solar module is finally manufactured. Most U.S. solar manufacturing is that last part of the process: Panel assembly.

studying the upstream supply of solar panels.⁴ The most closely related paper is Houde and Wang (2023), who also study the impact of import tariffs in the U.S. solar market. In contrast to Houde and Wang (2023), our study is more comprehensive and more focused on the supply side. Our analysis covers the whole U.S. solar market, going beyond the ...
