

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

What's going on with Syria's oil & gas industry?

After nearly 14 years of civil war, triggered by now-ousted Syrian president Bashar al-Assad's brutal crackdown on pro-democracy protests, Syria stands at a pivotal crossroads. The conflict has left the nation deeply fragmented, with numerous questions about its future, including the fate of the country's oil and gas industry.

Will Syria's oil & gas output revive?

"Syria's oil and gas output could revive to an extent, with better security and waivers to international sanctions," he continued. While Syrians are optimistic about the future of their country following the fall of the Assad regime, the country faces uncertainty following the collapse of a government that controls every aspect of daily life.

Why is energy demand increasing in Syria?

Energy demand in Syria has been increasing at a rate of roughly 7.5% per year due to the expansion of the industrial and service sectors, the spread of energy-intensive home appliances, and state policies that encouraged wasteful energy practices, such as high subsidies and low tariffs.

Is Syrian oil still occupying areas occupied by pro-democracy actors?

Syrian oil remains in areas occupied by a range of actors [Getty] After nearly 14 years of civil war, triggered by now-ousted Syrian president Bashar al-Assad's brutal crackdown on pro-democracy protests, Syria stands at a pivotal crossroads.

What happened to Syria's oil production after ISIS?

Since the swift advance of ISIS in 2014, Syrian oil production has essentially ceased. The lack of domestic crude oil production has caused the country's two main refineries to operate at less than half of normal capacity, resulting in supply shortages for refined petroleum products.
