

Having a dispute on the proper sizing of a feeder from a fused bus disconnect to a VFD panel. The input current to the VFD is 207A. The molded case circuit breaker ahead of the VFD is sized at 400A per the mfg recommendation. The only load in the VFD panel is the VFD; there are no other continuous or non-continuous loads.

Parker 650V 15 HP 230VAC VFD, bought from ebay for \$350 shipped, brand new. Still had that "freshly made electronics" smell to it. ... I'm using the contactors in the original electrical cabinet to trigger logic inputs on the VFD. So my stop brake, jog button and direction levers all work as they would have originally, and should I have ...

The temperature could easily be 10 to 20 °F hotter than on the ground floor. This often overlooked effect increases the heat load in electrical drive cabinets and could cause premature failure or incorrect operation of the drive unless enclosure air conditioners are used to keep the drive cabinet temperature below 105 °F. High Humidity

T1Flo Vented Enclosure with Fan, Type 1, have a thermostatically controlled forced-air ventilation system for the removal of heat.
