Law 13-19 prohibits the self-producer from feeding back the energy produced to the grid, imposing conditions on PV systems, such as implementing a Zero Feed-in system when connected to the grid. In concrete terms, Zero export implies: No part of the solar energy produced by the system is allowed to enter the grid.

Zero export equipment prevents large-scale solar systems from exporting excess power into the electricity grid. It includes ramping solutions which reduce electricity losses by smoothing the output power of your PV inverters. It is important to choose a high-quality ramping solution.Zero Export device enables solar system owners & operators to limit the excess amount of ...

Zero Export is for utilities that tell you not to export, installing zero export will not make it work when your utility is down. You want either enphase IQ8 microinverters with an IQ system controller 2 (their daylight backup system), or the SMA sunnyboy with SPS.

Solar panels generate electricity for your home. Energy is used directly within the home for appliances and devices. Excess energy is stored in a battery or managed by a smart inverter. No surplus energy is sent back to the grid (zero export). Stored energy is used when solar production is low (e.g., at night or on cloudy days).
