

What is the Isle of Man energy-from-waste facility?

The Isle of Man energy-from-waste facility was designed to convert all non-recyclable waste generated on the island into energy. The facility exports around five megawatts of electricity - around 10% of the island's electricity needs. You can see the latest figures [here](#). Opened in 2004, the facility comprises two incinerators.

Where does the Isle of Man electricity come from?

The majority of the Isle of Man's electricity is currently sourced from fossil fuels. The interconnector is a source of carbon neutral electricity on island and also provides a route to export electricity to the GB Market.

Can the Isle of Man rely on gas and oil?

It's clear that like all leading economies the Isle of Man cannot rely on gas and oil indefinitely. While the island's target to achieve net-zero by 2050 may seem far away, most of us worry about the current price of energy. Graph showing options to generate renewable power, store energy and utilise power on the Isle of Man.

Does the Isle of Man import energy from the UK?

The Isle of Man currently imports all of its energy from the UK (with the exception of what is produced from Sulby). In all future models, the Isle of Man remains dependent on GB for the provision of baseload. This is the case even where capacity is increased by building excess renewables, as the stabilisation is still provided by interconnectors.

Can Isle of Man export electricity to GB?

There are also limited opportunities for Isle of Man to export electricity to GB, due to the excess capacity of renewable generators expected to be in operation by 2050. Isle of Man assets also have an 11% CAPEX uplift compared to equivalent UK installations, due to labour, available skill-set, transport and economies of scale.

Could the Isle of Man re-import electricity from an offshore wind farm?

With interconnectors the Isle of Man could re-import electricity generated from an offshore wind farm, allowing GB to manage the balancing. This would likely result in much lower costs to consumers. CFDs are not currently open to the Isle of Man as it is not part of the UK.

What we do. Managing the Isle of Man's waste effectively and responsibly is critical, both for the community and the environment. That's why we work to promote re-use and recycling, and convert the remaining waste into energy. ...

An updated energy strategy outlining the Isle of Man's pathway to achieving net-zero carbon emissions by 2050 will go to Tynwald this week. The Energy Strategy 2024 builds on the Tynwald-approved 2023 plan, which sets out the government's policy direction and reaffirms its commitment to increased energy

independence, meeting net-zero targets, and ...
